

HAMILTON LEE-SMITH was born on Christmas Day, 1829, at Edinburgh, where his father, the Rev. George Smith, was a leading minister of the Established Church of Scotland.

About the year 1846 Mr. Lee-Smith was articulated to Mr. George Turnbull, who was then engineer of the London end of the Great Northern Railway, at that time under construction. The subject of this notice was engaged on the works of the Copenhagen Tunnel, and is said to have been equal to any amount of long-hand to do.

On the completion of his pupilage he became an Assistant Engineer on the same line, and held the post for two years. In 1851 Mr. Turnbull was appointed Chief Engineer of the East Indian Railway, and proceeded to organize his staff. He offered Lee-Smith a position as Assistant, and on the 20th of April, 1852, the latter sailed for India in company with his chief. On his arrival he was fellow assistant on Mr. Turnbull's branch to assist Mr. Edward Purser, a former fellow assistant on Mr. Turnbull's Great Northern Railway staff.

ASANSOL—

26th April 1920.

At this important railway centre coolies are collected from Local Agencies throughout the Central Provinces, the United Provinces and Bihar.

All three Forwarding Agencies are represented and they each have a Place of Accommodation for the reception of emigrants and airdars. From the 1st July to the 24th April, the day of inspection, the numbers passing through under the care of Messrs. Logan & Leslie were 43,705 (36,188 coolies & 7,517 airdars), of Messrs. Medland Boss 19,310 (15,771 coolies & 3,539 airdars), and of Messrs. R. D. M. 1,638 (712 coolies & 926 airdars), grand total of 71,653.

by a detour of 200 miles, at a cost of three annas and a half per maund for transit. This coal is piled up on the banks of the river, and can only be carried down when a flood rises in the Damodar: during the remainder of the year it is subject to deterioration from exposure to the atmosphere.

The hills of Chitana, Baharainah and Pachare have a fine appearance from Ransegunj. Baharainah is only about twelve miles from Ransegunj; it is 1,200 feet high and is easily accessible by palanquin; its neighbourhood is frequented by bears.

The coal mines at Ransegunj afford regular employment to 1,000 men and women, chiefly an aboriginal tribe, called Doms. They are accessible by a flight of 140 steps, which lead downwards of 120 feet, to galleries nine feet supported by pillars of solid coal; fifteen feet square, cut out of the coal. There are twenty-five shafts, with occasional galleries.
